Abstract:

Egypt is blessed with a rich history and heritage of antiquities and museums, and the museum is the place that collects a collection of exhibits and valuable things and preserves the cultural heritage of peoples throughout the ages as a witness to the civilization and achievements of peoples. Egypt enjoys a large repertoire of antiquities and museums to display its antiquities and history, and given the role played by museums in displaying antiquities and human heritage, especially in the Egyptian Museum in Tahrir, which is distinguished by many artifacts, the method of displaying them needs development. Considering the technological development in this era, there is a need to develop a future strategic vision for the project to develop the museum display in the Egyptian Museum in Tahrir according to international standards.

Keywords:

Development; Creative modern solutions; visual formation; Museum display systems.
